# amplitiv

Border Steering

Our Border Steering service is a roaming solution for addressing roaming scenarios in near border areas that delivers unrivaled control and enhanced roaming experience.

With Amplitiv's Border Steering you can conveniently save your subscribers from accidental roaming situations and the bill shock experience that follows. Block access to unwanted mobile networks and unfavorable wholesale rates that lead to lost revenue.

Apply Border Steering as a standalone service or launch it with your standard Steering of Roaming application.

GSMA™

Associate Member

Enhanced customer experience

prevent subscribers from accessing undesired networks

enable or disable the service for certain areas or customers, depending on their needs (per community/IMSI whitelists)

modify restriction rules to provide the best balance between blocking service and ensuring continuity (grace period time)

ensure emergency calls are possible at all times

Cutting-edge configuration

provide a comprehensive, user-friendly GUI

manage border steering conveniently with the use of community filters you create yourself

define and modify border area cells with the help of intuitive import and export tools

adjust rejection times to satisfy expectations of all your subscribers. Leverage the precision the service offers and configure it to the smallest detail

Real-time reports and statistics

track all events for troubleshooting or general overview purposes

view multiple summary options and identify critical cases (countries, communities or IMSIs)

adjust the configuration for certain customers with the use of expanded IMSI reports

Technical features

fully designed and developed by Amplitiv experts

committed, long-term partnership driven by a pro-client approach

trusted wholesale apps provider and global partner of Comfone

agile platform management and supervision

controlled revenue stream

competitive time to market (TTM)

flexible on-premise and SaaS models
